Meeting - 01/31/23

👥 Participants	Ⓙ Joshua🍦 Kareem AssadⒻ FrankⒼ Gilles Myny
◎ Created By	Ⓙ Joshua
⊙ Type	Professor Meeting
◷ Created	@January 31, 2023 10:56 AM
◷ Last Edited Time	@January 31, 2023 12:29 PM
🗓 Date	@January 31, 2023
⊙ Status	

What did we do last week?

- Presentation Feedback from Prof
  - When listing the milestones, milestone 5 due date a bit late (?); move to a week or two before the final report date (April 12th); maybe communicate with other teams when final integration can start and end
  - Prepare documentation to be passed on to future years
  - Include references in Slides, Poster Fair, and Final Report
  - Figure out a date where we would finalize all sharing of relevant material for next years
  - How do we decide at what point we stop training for each dataset, when would over-fitting occur
  - Performance evaluation on the Pi
  - Start planning out the final report, to determine what data we want to gather
  - Preferred approach when it comes to detecting the sides of road lights

- Creating another class for side view

- Deleting any angled/side images from the dataset

What are we doing this week?

- Run detection using multiple weight files

- Connect models with python

- Improve model detection (edge cases, unfamiliar viewpoints, false positives)

- Grab empirical data and test

- Consider collecting data for final report

Potential blockers?

-
